

Rendezvous with Rama

An enormous cylindrical object appears in Earth's solar system, hurtling toward the sun. A ship is sent to explore the mysterious craft—which the denizens of the solar system name Rama—and what they find is intriguing evidence of a civilization far more advanced than ours. They find an interior stretching over 50 kilometers; a forbidding cylindrical sea; mysterious and inaccessible buildings; and strange machine-animal hybrids, or biots, that inhabit the ship. But what they don't find is an alien presence. So who—and where—are the Ramans? Often listed as one of Clarke's finest novels, *Rendezvous With Rama* has won both the Hugo and the Nebula Awards. A fast-paced and compelling story of an enigmatic encounter with alien technology, *Rendezvous With Rama* offers both answers and unsolved mysteries that continue to fascinate readers decades after its first publication.
